DETAILED ACTION

Response to Arguments

Applicant's argument filed on 3/13/2008 with respect to claims 30-58 is acknowledged.

The Information Disclosure Statements

The prior art cited in the information disclosure statements filed on 3/13/2008 has been considered.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Erik R. Swanson on 6/19/2008.
3. In claim 30, line 6, after the word "region", the phrase - - in first and second beam paths - - has been inserted.
4. In claim 30, line 10, after the word "in," the article "a" has been changed to the article - -the - -.
5. In claim 30, line 11, after the word "in," the article "a" has been changed to the article - -the - -.
6. In claim 58, line 6, after the word "region", the phrase - - in first and second beam paths - - has been inserted.

7. In claim 58, line 10, after the word "in," the article "a" has been changed to the article - the - .
8. In claim 30, line 11, after the word "in," the article "a" has been changed to the article - the - .

So claims 1 and 58 will read as:

Claim 30 (Currently Amended): An apparatus for the spectral selection and detection of spectral regions of a light beam, the apparatus comprising:

a first selection unit including[[:]] a first spectral splitting device configured to spectrally split the light beam; and

a first device configured to deflect a portion of the spectrally split light beam so as to provide a deflected first spectral region **in first and second beam paths** and an undeflected second spectral region; and

a first detection unit including a plurality of first detectors, at least a first one of the first detectors being disposed in **the** first beam path of the spectral region, at least a second one of the first detectors being disposed in **the** second beam path of the first spectral region, each of the first and second first detectors having a respective different detection property or using a respective different detection method, and each of the first and second first detectors including at least one of:

a photomultiplier configured to detect fluorescence,

an arrangement of photodiodes configured for making quick measurements,

and an arrangement of avalanche photodiodes configured for detecting weak signals.

Claim 58 (Currently Amended): A scanning microscope comprising an apparatus for the spectral selection and detection of spectral regions of a light beam, the apparatus comprising:

a first selection unit including: a first spectral splitting device configured to spectrally split the light beam; and

a first deflecting device configured to deflect a portion of the spectrally split light beam so as to provide a deflected first spectral region **in first and second beam paths** and an undeflected second spectral region; and

a first detection unit including a plurality of first detectors, at least one of the first detectors being disposed in **the** first beam path of the first spectral region, at least one of the first detectors being disposed in **the** second beam path of the reflected first spectral region, each of the first detectors having a respective different detection property or using a respective different detection method.

Allowable Subject Matter

1. Claims 30-37 and 41-58 are allowed.
2. The following is an examiner's statement of reasons for allowance:

As to claim 30, the prior art of record, taken alone or in combination, fails to disclose or render obvious an apparatus for the spectral selection and detection of spectral regions of a light beam, the apparatus comprising: a first selection unit

including: a first spectral splitting device configured to spectrally split the light beam; and a first deflecting device configured to deflect a portion of the spectrally split light beam so as to provide a deflected first spectral region in first and second beam paths and an undeflected second spectral region; and a first detection unit including a plurality of first detectors, at least a first one of the first detectors being disposed in the first beam path of the first spectral region, at least a second one of the first detectors being disposed in the second beam path of the first spectral region, each of the first and second first detectors having a respective different detection property or using a respective different detection method, in combination with the rest of the limitations of the claim.

Claims 31-37 and 41-57 are allowed by the virtue of dependency on the allowed claim 1.

As to claim 58, the prior art of record, taken alone or in combination, fails to disclose or render obvious a scanning microscope comprising an apparatus for the spectral selection and detection of spectral regions of a light beam, the apparatus comprising: a first selection unit including: a first spectral splitting device configured to spectrally split the light beam; and a first deflecting device configured to deflect a portion of the spectrally split light beam so as to provide a deflected first spectral region in first and second beam paths and an undeflected second spectral region; and a first detection unit including a plurality of first detectors, at least one of the first detectors being disposed in the first beam path of the spectral region, in combination with the rest of the limitations of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
